

Web app dashboard with the actual app sitting as a browser extension - UI-> desktop UI that be extended to a mobile phone

Landing page

1. agency index banner
2. pie chart showing decision autonomy
3. agency index graph

deeper insights (1st tab on top bar)

4. agency index factor cards - cards similar to ecs website product cards
5. decision information table
6. Baseline agency quality tracking throughout certain time (check up on utm sources and if they can be used for tracking)
7. top drift triggers (deadlines can be a drift trigger, which would be tracked using a scheduler. Multitasking is also a drift trigger which could be tracked using plan mode)

Improvement (2nd tab on top bar)

1. Intent Map: for improving agency index user can set a goal for agency index on certain days, and popup banners can be used to help achieve this goal
2. plan mode Plan for specific projects add scheduling if needed import intent maps if needed.

Tasks:

Valli: test out various models for reasoning and task specific text generation

Avni & sanya : ui/ux for web app

Manjari - start on backend
